

## Flood Protection Doors

### Reliable Flood Defence for Onshore Infrastructure

Point Eng Ltd's flood protection doors are purpose-built to defend buildings, facilities, and critical infrastructure against rising water levels and flash flooding. Engineered for high-resilience performance, each door features robust sealing systems and corrosion-resistant materials to ensure watertight integrity and long-term durability. Whether protecting utility stations, industrial sites, or commercial premises, our flood doors offer dependable security in flood-prone environments

### Tailored Solutions for Complex Sites

We recognize that no two sites are the same. That's why Point Eng Ltd provides fully customizable flood door systems to meet specific architectural layouts, operational needs, and regulatory standards. Options include single or double-leaf configurations, standard or high security locking solutions, and integration with monitoring or alarm systems. Our engineering team works closely with clients to deliver solutions that balance safety, functionality, and compliance.

### Efficiency Meets Compliance

Designed for straightforward installation and minimal maintenance, our flood doors help clients meet local and national flood protection regulations while optimizing operational uptime. With advanced manufacturing processes and precision cutting layouts, we ensure accurate manufacture and prompt delivery. Point Eng Ltd combines technical expertise with hands-on support to help businesses mitigate flood risks and protect assets with confidence.
